IN608: Intermediate Application Development Concepts
Level 6, Credits 15

Django REST Framework, React & OpenTDB API

Assessment Overview

For this assessment, you design, develop & deploy a quiz tournament API using Django REST Framework, React, OpenTDB API & Heroku. The main purpose of this assessment is not just to build a full-stack application, rather to demonstrate an ability to decouple the back end from the front end by creating two separate applications which interact with each other. Marks will be allocated for functionality & best practices such as application robustness, code elegance, documentation & git usage.

With the nation-wide lockdown over, your local pub is now able to run their weekly quiz tournament onsite. The online quiz tournament application proved to be a huge success & the pub owners ask if you want to create a public API which allows users to create their own quiz tournaments.

Assessment Table

Assessment Activity	**Weighting**	**Learning Outcomes**	**Assessment Grading Scheme**	**Completion Requirements**
Practicals	20%	1	CRA	Cumulative
Django & OpenTDB API	50%	1, 2	CRA	Cumulative
Django REST Framework, React & OpenTDB API	30%	1, 2	CRA	Cumulative

Conditions of Assessment

This assessment will need to be completed by Friday, 20 November 2020 at 5pm.

Pass Criteria

This assessment is criterion-referenced with a cumulative pass mark of 50%.

Submission Details

You must submit your program files via **GitHub Classroom**. Here is the link to the repository you will be using for your submission – https://classroom.github.com/a/sSA9csHf.

Authenticity

All parts of your submitted assessment must be completely your work and any references must be cited appropriately.

Policy on Submissions, Extensions, Resubmissions & Resits

The school's process concerning **Submissions, Extensions, Resubmissions and Resits** complies with Otago Polytechnic policies. Students can view policies on the Otago Polytechnic website located at https://www.op.ac.nz/about-us/governance-and-management/policies.

Extensions

Please familiarise yourself with the assessment due dates. If you need an extension, please contact your lecturer before the due date. If you require more than a week's extension, a medical certificate or support letter from your manager may be needed.

Resubmissions

Students may be requested to resubmit an assessment following a rework of part/s of the original assessment. Resubmissions are completed within a short time frame (usually no more than 5 working days) and usually must be completed within the timing of the course to which the assessment relates. Resubmissions will be available to students who have made a genuine attempt at the first assessment opportunity. The maximum grade awarded for resubmission will be C-.

Learning Outcomes

At the successful completion of this course, students will be able to:

1. Demonstrate sound programming by following design patterns and best practices.
2. Design and implement full-stack applications using industry relevant programming languages.

Instructions

Functionality & Robustness - Learning Outcomes 1, 2

- Dependencies are correctly managed using **Pipenv**/**Pipfile** & **npm**/**package.json**.
- Django REST Framework application:
  - For each model class:
    - Create a new quiz tournament. Fields include name, category, difficulty, start date & end date.
    - Dynamically fetch categories from the following URL https://opentdb.com/api_category.php. Choices can not be hardcoded.
    - Create a serializer class.
    - Create a **APIView** class or **api_view** function which handles the **GET**, **POST**, **PUT** & **DELETE** HTTP methods.
      - **Resource:**
  - Data is persistently stored in **Heroku PostgreSQL**.
    - **Resource:** Heroku PostgreSQL
  - Application deployed to **Heroku** with **Gunicorn**.
  - Unit & integration tests cover models, views & API.
- React application:
  - Request quiz tournament data via **Django REST Framework** end-points using **Axios**. Data includes name, category, difficulty, start date, end date, question, correct answer & incorrect answers.
  - Create a new quiz tournament. Display the form in a modal. Fields include name, category & difficulty. Select drop downs are populated with categories & difficulties.
  - View quiz tournaments in a table. Fields include name, category, difficulty, start date, end date & creation date.
  - Update a quiz tournament. Display the form in a modal. Fields include name, category & difficulty.
  - Delete a quiz tournament. Prompt the user for deletion.
  - View quiz tournament questions when the quiz tournament name is clicked.
  - Visually attractive user-interface with a coherent graphical theme & style using **Reactstrap**.
    - **Resource:** Reactstrap
  - Application deployed to **Heroku** with **React Buildpack**.
    - **Resource:** React Buildpack
  - Unit & integration tests cover components.
  - End-to-end tests cover creating, updating & deleting a quiz tournament & viewing a quiz tournament's questions.

Documentation & Git Usage - Learning Outcome 1

- Provide the following information in the repository **README** file:
  - How do you set up the environment for development, i.e., after the repository is cloned, what do I need to start coding?
  - How to run tests.
  - How to deploy the application.
- At least 10 feature branches excluding the **master** branch.
  - Your branches must be prefix with **feature**, for example, **feature-<name of functional requirement>**.
  - For each branch, merge your own pull request to the **master** branch.
- Commit messages must reflect the context of each functional requirement change.
